Feintool's tool systems:
meeting the most discerning requirements

With each stroke of the fineblanking press, a finished drive plate for a SMART gearbox is produced in this 2-stage tool from Feintool.

The tool performs the key function in the production process. The quality of every single part fabricated depends on the precision of the tool. It provides for cost-effective processing and maximizes the number of parts produced during its cutting life.

Ultimately, the tool is decisive to the financial viability of a production order. It is thus the core element of fineblanking technology.
