Available from your book shop

As a contribution to the training of future technicians and engineers, and for the information of design, development and production specialists - as well as in the interests of spreading knowledge about forming and fineblanking technology - Feintool has published a comprehensive and easy-to-follow handbook.

***Forming and Fineblanking - Cost Effective
Manufacturing of Accurate Components in Sheet metal***
is available for Euro 8.50 from technical bookshops.

***Cold Forming and Fineblanking –
a handbook on cold processing, material properties, part design***

This cold forming and fineblanking handbook ties together the metallurgical and technological aspects of producing accurate, "near-netshape" parts for withstanding heavy loads in high-strength sheet steel. Often applying basic principles to real-life situations, it points to new combinations of processes which, by appropriate part design, material selection and production layout, can economically be optimized.
