

Profile

Core Competencies under one Roof

Since its IPO in August 1998, Feintool has worked hard to strengthen the group and extend the added-value chain for itself and its customers. This strategy has proven to be correct, and Feintool today is now one of the **leading technology and system suppliers** in a number of global fields of application, sectors and markets.

With its successful core business as a foundation and an existing platform of regional production and sales companies, Feintool is now ideally equipped to meet customer requirements on a partnership basis. Through its cross-divisional research & development activities, Feintool is continually strengthening its competitive position for the benefit of the customers, who purchase its systems: the ongoing development of new applications guarantees Feintool's technological lead.

As a specialist in system construction, Feintool offers its ***Fineblanking Technology*** and ***Automation*** Division customers engineering, complete systems, handling modules and services with a high return on investment. It helps them to find the best - and most cost-effective - technology for the production of parts, components, assemblies and finished products.

As a reliable supplier in the ***System Parts*** Division, Feintool offers its customers innovative, economical solutions for new applications using fineblanking/forming components. It combines all this with global logistics services and an excellent value for money.

We pride ourselves on a strategic geared to **long-term success**, an effective group structure, a uniform corporate culture and proactive utilization of synergies to ensure maximum satisfaction for customers, shareholders and employees.
